## Homework Assignment: Build a Website using HTML, CSS, JavaScript, and Bootstrap

### Objective:

To build a responsive website that showcases your skills in HTML, CSS, JavaScript, and Bootstrap.

E-commerce Website: Create an e-commerce website that sells a specific type of product, such as clothing or electronics. Your website should have a homepage, a product page, a shopping cart page, and a checkout page. Use HTML to structure the content, CSS to style the website, and Bootstrap to create a responsive layout. Use JavaScript to simulate shopping cart (Add product, Update quantity, Delete product)

### Requirements:

1. Use HTML to structure the content of your website. Your website should contain a header, a main section, and a footer. The header should contain a logo and a navigation menu that links to different sections of the website. The main section should contain at least three sub-sections that showcase your skills or interests. The footer should contain your contact information.
2. Use CSS to style your website. Choose a color scheme, font styles, and layout that match the content and purpose of your website. Your website should be responsive, meaning it should look good on different devices (desktop, tablet, and mobile).
3. Use JavaScript to add interactivity to your website.

4. Use Bootstrap to enhance your website's design and functionality. You can use Bootstrap's grid system to create a responsive layout, and its components (such as forms, buttons, and alerts) to add functionality to your website.

### Grading Criteria:

Your website will be graded based on the following criteria:

1. HTML: Is the content structured using HTML and organized into a header, main section, and footer?
2. CSS: Is the website styled using CSS and responsive to different devices? Does the design match the content and purpose of the website?
3. JavaScript: Is the website interactive using JavaScript? Does the interactivity enhance the user experience?
4. Bootstrap: Is Bootstrap used to enhance the website's design and functionality? Does it add value to the website?
5. Creativity: Is the website creative, unique, and visually appealing? Does it showcase your skills and interests effectively?
6. Overall Quality: Is the website well-designed, functional, and free of errors?
